

### Natural gas boiler burner

#### **Product introduction of the natural gas boiler burner:**

Natural gas boiler burner is a kind of combustion system for boiler industry in which natural gas is used as fuel. Because of the advantage of energy saving, Eco friendly, high degree automation, convenient combustion adjustment, fast heating up/cooling speed, high boiler thermal efficiency etc., the natural gas boiler burner become more and more popular, and be widely used in the heating industry. Since natural gas is flammable and explosive, the combustion state of natural gas plays an important role in the safe operation of boilers.

#### **Characteristics of natural gas boiler burners:**

Safe combustion, wide application range;  
Simple igniter structure, reliable quality;  
The main combustion part can be adjustable by high-low-ff control;  
Designed with safe and reliable flame detector;  
Designed with 2mm thick high strength air reflector;  
Stainless steel box with high strength.

#### **Shipping &Package:**

Port: Shanghai, or any other China Sea port

#### **After-sales service during war any period:**

1. Turn-Key Solutions, including design, development, production.
2. Dispatch experts to carry out service on site:
  - A. Installation and debug of the machinery;
  - B. Train the first-line operators and technologies;
  - C. Carry out any other service client may need
3. Assist you to prepare for the first construction scheme;
4. Examine the equipment regularly;
5. Take initiative to eliminate the troubles rapidly at site;
6. Spare parts offer;
7. Provide technical exchanging;
8. Provide maintenance for big items.

#### **Strict quality control system:**

1. Follow ISO9001 management system
2. Company Inner quality control chart: Incoming quality control (IQC) ----In process Quality Control (IPQC) ----Outgoing QC (FQC) ----Record and Solutions
